Marginalia Web Site — Shift 5

Marginalia Web Site — Shift 5

Shift 5 — April 23, 2026

Shift 5 — April 23, 2026

Duration: ~4 hours

Status: Bug fixes complete ✓ / Phase 3 execution continues next shift

---

Starting State

Starting State

- Phase 3 (Releases) implemented but buggy
- Keystatic releases dashboard broken: "Not found" when clicking releases, overlay rendering issues, infinite reload loops
- Public `/releases` page showing "No artwork" for all entries
- Platform links on release detail page: icon-only, horizontal layout

---

What Was Done

What Was Done

1. Keystatic "Not found" Root Cause — Diagnosed and Fixed

1. Keystatic "Not found" Root Cause — Diagnosed and Fixed

Full debug session (`/gsd-debug`) run on the "Not found" error when clicking releases in Keystatic admin.

Root cause: Keystatic's local-mode client caches the filesystem tree in memory after a single `/api/keystatic/tree` fetch at SPA mount. Only Keystatic's own `/api/keystatic/update` calls invalidate this cache. External mutations (custom DELETE API, direct file edits) leave the tree stale. When `useItemData()` calls `getTreeNodeAtPath(tree, 'content/releases/medusa-1.yaml')` against the stale tree, it returns undefined → renders "Not found".

Fixes applied:

- Removed stale empty `content/releases/medusa-1/` folder (leftover from schema iteration)

- Recreated `content/releases/medusa-1/description.mdoc` (required by `fields.document` in schema — Keystatic's `readItem` returns null without this file)
- Changed `handleDelete` success path from `setReleases(prev => prev.filter(...))` to `window.location.reload()` — forces Keystatic tree re-fetch after every out-of-band filesystem mutation

Eliminated hypotheses:

- SHA mismatch in blob endpoint (happens at a later stage than the actual failure)
- `title: Medusa` casing issue (title and slug are stored separately)
- Dual presence of `medusa-1.yaml` + `medusa-1/` folder (Keystatic ignores dirs with `dataLocation='outer'`)

2. Keystatic Releases List — Custom Page Approach Abandoned

2. Keystatic Releases List — Custom Page Approach Abandoned

Multiple iterations tried and reverted:

Attempt	Problem
Custom `page.tsx` with `position: fixed; z-index: 9999`	Overlaid site nav; visual issues
Custom `page.tsx` with `minHeight: 100vh`	Stuck on "Loading..." — fetch not completing reliably
`KeystaticEnhancer` DOM manipulation (text reformat + sort)	Unreliable — Keystatic re-renders undo changes

Final decision: Use Keystatic's native list as-is. Removed `KeystaticEnhancer.tsx` entirely. No custom page, no DOM manipulation.

3. Keystatic Layout — Site Nav/Footer Hidden

3. Keystatic Layout — Site Nav/Footer Hidden

Root layout (`app/layout.tsx`) renders `` and `` for all routes including `/keystatic/*`. Fixed in `app/keystatic/layout.tsx` using CSS `:has()`:

```
body:has([data-keystatic-admin]) > header,
body:has([data-keystatic-admin]) > footer { display: none !important; }
body:has([data-keystatic-admin]) > main { flex: unset; }
```

A `` marker element triggers the rule — no JS, no class toggling.

4. Public Releases Page — Artwork Fixed

4. Public Releases Page — Artwork Fixed

`/releases` grid was showing "No artwork" for all entries. Root cause: `ReleaseCard` only checked `entry.coverArt` (uploaded file, not set for any existing releases). The actual artwork is stored in `platformLinks.artworkUrl` (iTunes CDN URL, populated by the auto-fill tool).

Fix: Pass `artworkUrl` from `platformLinks` through `ReleasesPage` → `ReleaseGrid` → `ReleaseCard`. Card falls back to `artworkUrl.replace('3000x3000bb', '600x600bb')` when no uploaded cover art exists. Matches the same fallback pattern already used on the release detail page.

Files changed: `app/releases/page.tsx`, `components/releases/ReleaseGrid.tsx`, `components/releases/ReleaseCard.tsx`.

5. Platform Links UI — Redesigned

5. Platform Links UI — Redesigned

Release detail page platform links changed from horizontal icon-only row to vertical "Listen on X" card list.

`ReleaseLink.tsx`:

- Full-width card: `border border-[--color-surface] bg-[--color-surface] rounded-lg px-5 py-4`
- Platform icon (22px) + "Listen on {label}" bold text + arrow icon
- Hover: `border-[--color-accent-lime]` + text color change + arrow slides right

`PlatformIconRow.tsx` + `MorePlatforms.tsx`:

- Changed from `flex flex-wrap gap-4` → `flex flex-col gap-2`
- Divider lines removed

6. LayloButton — Redesigned

6. LayloButton — Redesigned

"Save" button replaced with branded "Stay in the loop" card matching platform link style.

- Purple gradient: `from-[#580AFF] to-[#9B30FF]`
- Bell notification icon
- Same dimensions and arrow as `ReleaseLink`
- Hover darkens gradient

Files Changed This Shift

Files Changed This Shift

```
app/keystatic/layout.tsx                      – hide site nav/footer via CSS :has()
app/keystatic/KeystaticEnhancer.tsx           – DELETED
app/keystatic/collection/releases/page.tsx   – DELETED (custom page abandoned)
app/api/admin/releases/route.ts              – added mtime to response
app/releases/page.tsx                         – pass artworkUrl from platformLinks
components/releases/ReleaseGrid.tsx          – accept artworkUrl prop
components/releases/ReleaseCard.tsx          – fallback to artworkUrl for artwork
components/releases/ReleaseLink.tsx          – redesigned: vertical card + text
components/releases/PlatformIconRow.tsx      – vertical layout
components/releases/MorePlatforms.tsx        – vertical layout
```

```
components/releases/LayloButton.tsx          - redesigned: gradient + bell icon
content/releases/medusa-1/description.mdoc   - recreated (required by fields.document)
```

Known Issues / Watch Items

Known Issues / Watch Items

- `content/releases/` has leftover duplicate entries (`medusa.yaml`, `medusa` dir, `medusa-1` dir) from debug session — should be cleaned up manually in Keystatic
- Keystatic GitHub OAuth (issue #1497) still unresolved — local-only workflow remains
- `fields.document` requires `{slug}/description.mdoc` to exist alongside every flat `{slug}.yaml` — Keystatic's create flow handles this automatically; manual YAML creation must include this file

---

Next Session

Next Session

Continue Phase 3 execution per roadmap plan.
